Statement:

This device is well packed and functions well before and upon delivery. Please follow the manual instructions and note well the warning details to avoid any technical issues. Damages and problems caused by overlooking and incorrect operation are beyond the dealer and factory responsibilities. This manual is subject to changes please ask if any updates were made following your purchase.

1. Brief Introduction

Thanks for choosing AQUARAY 500SBW the newest addition to our IP rated moving head AQUARAY series. This fixture was developed with the newest technologies, with advanced electronic controls and excellent user-friendly design, fully complying with CE standard, following international standard DMX512 signal mode.

Equipped with Yodn MSD 440 watts lamp and multi-layer lens, it can cast bright beam and clear gobos as well as fresh colors thanks to the high brand color wheel. Three DMX channels mode, 2.8' full-color touch 180° reversible screen, convenient to hang on the truss. It has a fast and smooth movement with 540° Pan and 270° Tilt. It runs CMY color mixing effects with a color wheel of 11 different colors plus open. 2 gobo wheels, 15 fixed gobo plus open and 7 rotating gobos plus open. 2 rotating prisms, one 8 facet prism and one 24 facet prism with a rainbow color filter. Beside the linear dimmer and adjustable strobe functions, the light is also equipped with a fan speed cooling monitoring system. This fixture is ideal for multifunctional and dynamic indoor application and the perfect solution for all outdoor installations.

- 02 - Lamp body
- 03 - Lamp arm
- 04 - Lock
- 05 - Lamp holders
- 06 - Control key
- 07 - Touch the display
- 08 - Handle

- 01 - 3Pin DMX In
- 02 - 3Pin DMX Out
- 03 - Power Switch

Attached components info above for your better understanding of the AQUARAY 500 SBW

4. Safety and Warning Info

This device is only suitable for professional purpose. Please examine well the items upon receipt, if any damages were inspected by delivery contact the company as soon as possible.

To steer clear of the damages caused by electric shock, fire, UV, lamp burst and device falling etc. please read the manual through before charging and installation. Being aware of all the danger notices and abiding by the instructions mentioned is crucial before and during the operation of the fixture. If any other question, your dealer.

4.1 Anti-overheating

Ta =40°C

Switch off the device immediately once the ambient temperature is over 40°C.

4.2 Prevention of burst

Change the lens if there are cracks or dent on it.

Only the original brand lens is suitable to change.

Lens Dimension: \varnothing 158×52 mm

4.3 Prevention of falling accidents

Do not carry the device alone.

Make sure the facility can withstand ten times the weight of the light before hanging.

Please make sure the mounting hardware is strong enough without any damage, and use the safety chain alongside for security. Let the pulley below the working place when installing or removing the device.

4.4 Anti UV

Staring at the casting beam is definitely forbidden.

Do not use the device without lens or cover.

Change the lens and cover if broken.

4.5 Prevention of electric shock

Do not open the device, there are no user-serviceable parts inside.

Only qualified electricians can connect the electric power.

Before connecting, make sure all the voltage comply with the specified type and equipped with overload and leakage protection. Ensure that power is cut off when wiring the device to the AC mains supply.

Ensure that the device is electrically connected to a solid ground. 

Switch off the power before replacing and installing the lamp.

Do not immerse the fixture in the water or liquid.

Do not apply power if the device or mains cable is in any way damaged.

4.6 Prevention of fire and burning

Do not install the device on flammable material surface directly.

Do not short circuit the temperature protection terminal or fuse. Use the standard fuse.

Stay away of the inflammable material.

The fixture need to be positioned so that the objects hit by the beam of light are at least 18 meters from the lens.

The fan or the ventilation should be far from any material within the range of T 0.5m.

Do not put any item over the lens.

Cooling the device at least 20 minutes before package and delivery.

Do not change with the unoriginal brand spare parts.

4.7 PI 55 Protection Rating.

The fitting is protected against dripping water, rain, splashed or jets of water. It cannot be immersed in water.

Attention

In order to fix the device securely, using 2 omega holders and 4 quick lock fasteners correctly into the quick lock hole turned 90 clockwise is necessary .Adding a safety chain to the base hole not the handle is extra and necessary safety method .

5. DMX512 Connection

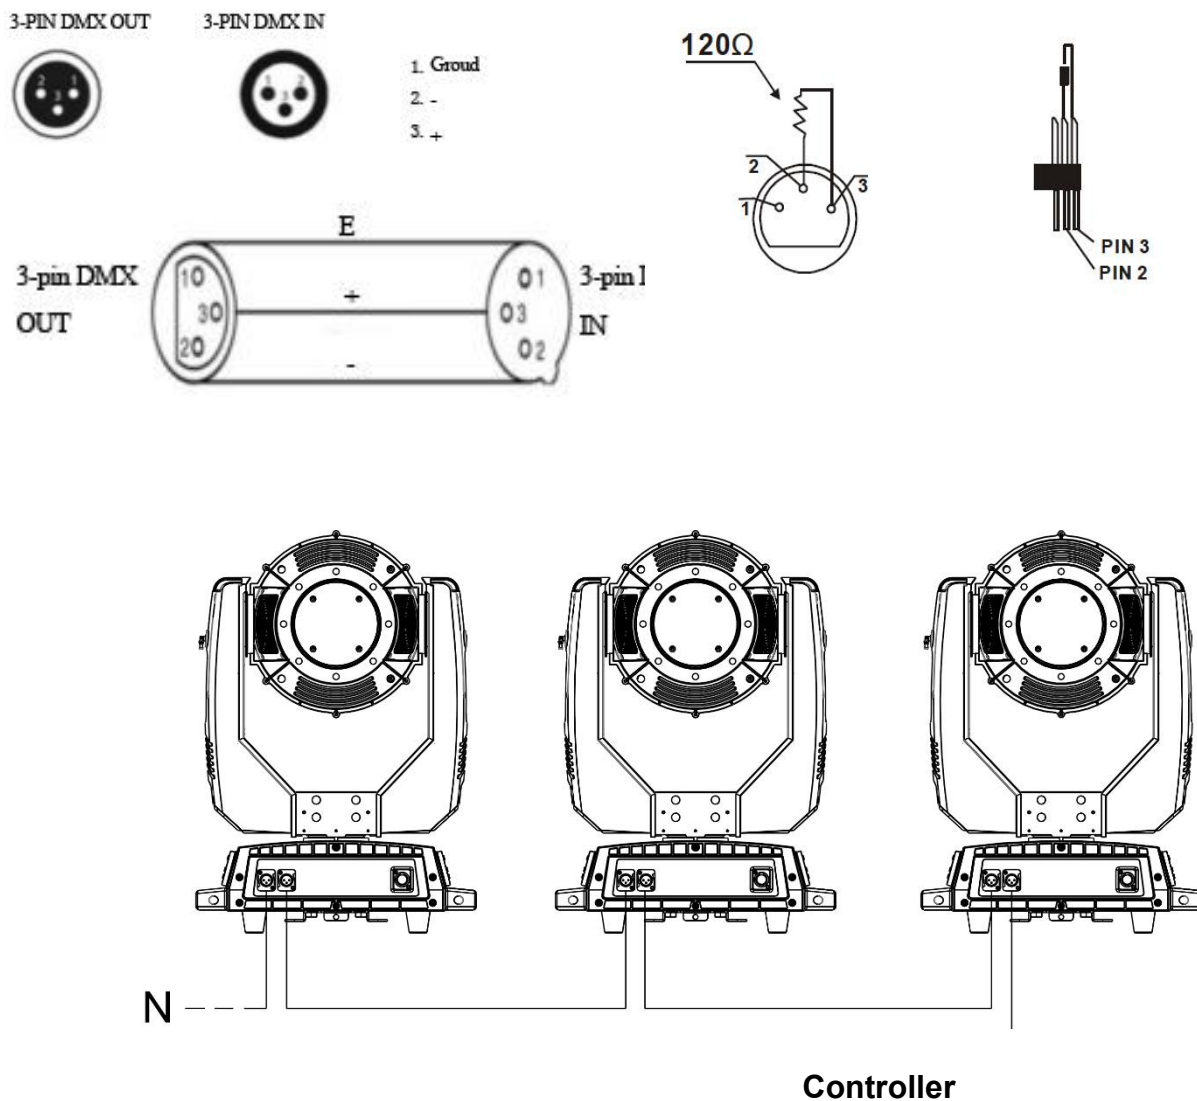

DMX512 cable must use the professional shielded twisted pair cable. The standard loudspeaker cable is not reliable to control the long-range data. 24 AWG cable is suitable for more than 300 meters long-distance signal transmission and must add the DMX 512 signal amplifier.

Do not use two outputs to separate the connection, if separated, a DMX512 splitter is necessary. If use the DMX512 splitter, at first connect DMX512 Splitter input terminal to controller and then connect from the splitter output terminal to next device.

Do as above to connect other devices, and finally coupled with a 120 Ω loop resistance terminal insertion.

DMX-512 loop resistance terminal

If the DMX line is too long or placed in some noisy electric signals places like disco, nightclub, ballroom etc... Using DMX loop resistance terminal is necessary. Welding a 120Ω resistor terminal between the pin 2 and pin 3 as below and plug it into the last light XLR output terminal.

6. Package Info

AQUARAY 500 SBW are packed in 1 in 1 or 2 in 1 flight case or carton with accessories inside.

Accessories accompanied with one light

Item	Quantity
Manual	1
Safety chain	1
Omega clamp	2
DMX cable	1
Power wire	1

7. AC Input Power

AQUARAY 500 SBW input voltage, power consumption, and fuse standard

Input Voltage	Power Consumption	Frequency
110~240V	600W	50/60HZ

Fuse Voltage	Fuse Current	Size
250V	10A	5×20

Attention: Only qualified electrician can operate the power related work. Make sure the voltage input comply with the specified standard as well as grounded and equipped with overload and leakage protection.

Live	Neutral	Earth	
Red	Blue	Yellow-green	

8. Lamp Info

Brand	Power Consumption	Lifespan	Lumen
Yodn MSD 440 W	440 W	2000 hrs	114,900 Lux

Warning! In case of the extra potential damages caused by lamp burst, change the lamp before it's over 125% specified lifespan.

Note:

1. After a successful starting attempt to keep the lamp burning for at least 15 minutes in order to complete the chemical cycle of the lamp to secure the lifetime.
2. Before re-light the lamp, is necessary to keep the lamp off at least 5 minutes.

Bulb replacement

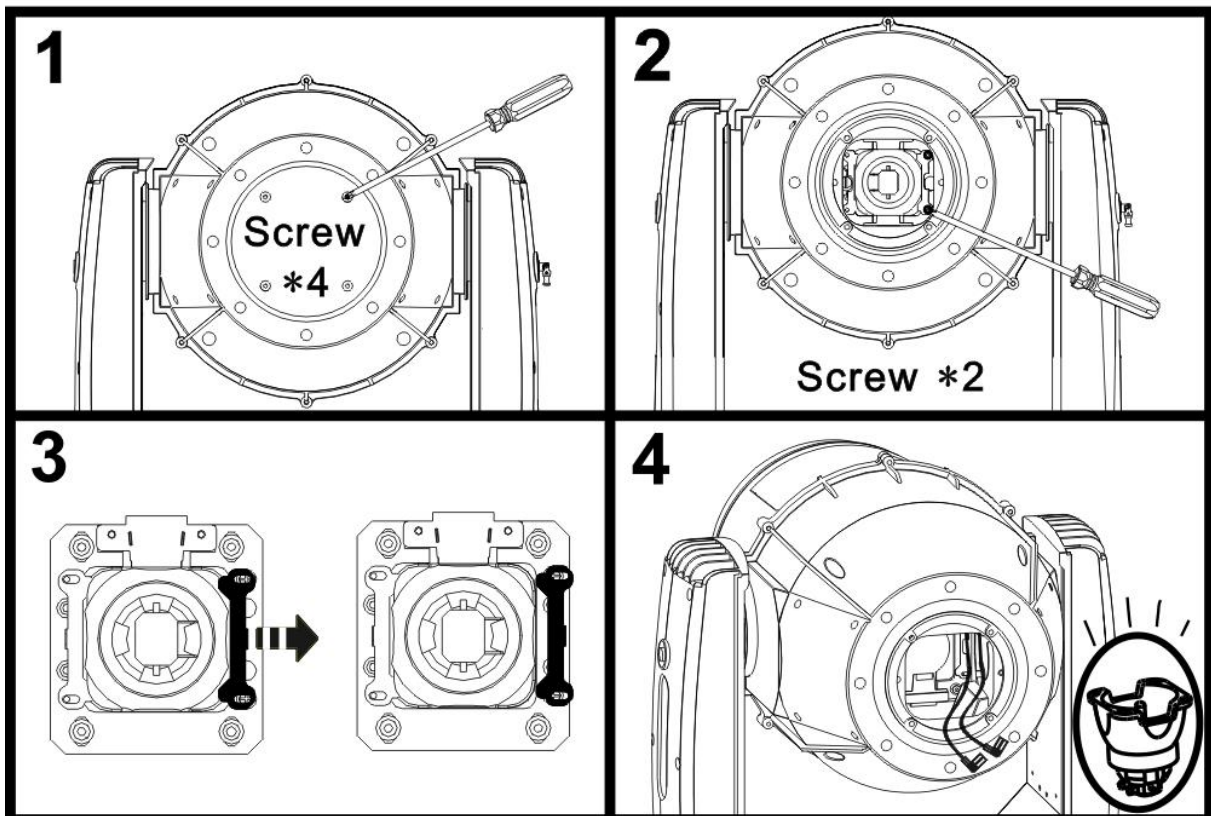

Note! When replacing the bulb, do not touch the lamp wick with bare hands to avoid the oil stains on the lamp wick.

The lamp must be disconnected from the power and let it completely cool down.

The locked arm of Y-axis must be at 60° position, the specific operation is as follows:

1. Lock the Y-axis at 90° position, then open the cover. (Picture 1)
2. Move away the cover, you could see the bulb inside, any operation need to wait the lamp cool down. (Picture 2)
3. One hand press the lamp holder, the other hand hold the lamp and unplug the lamp power cable, then gently take out the lamp. (Picture 3 and 4)
4. Tidy the lamp with soft cloth, clear reflector will make the lamp better light efficiency;
5. Instead, install the lamp in order and make sure the lamp is in the holder tight and the power cable is connected properly before using.

LAMP REPLACEMENT

9. Gobo Wheels Info

AQUARAY 500 SBW is equipped with 2 gobo wheels, 15 fixed gobos plus open and 7 rotating gobos plus open with smooth gobo rotation

1. Only operate the projector after having checked that the housing is firmly closed and all screws are tightly fastened.
2. 2. Mounting positions: 0° and 90°. (Fig.1)

Fig.1

3. Do not touch the projector when it is electrified on rainy days. If the operating is necessary, the operator must wear insulating gloves, so as to avoid electric shock.
4. Connection must be made to a power supply system fitted with efficient earthing. It is moreover, recommended to protect the supply lines of the projectors from indirect contact and/or shorting to earth by using appropriately size residual current devices.
5. Do not cut the power when the lamp is on. Before shutting the power, need to turn off the lamp by controller and keep the fan running 3-5 minutes to cool down the lamp.
6. Use a soft wet textile or an air-jet for cleaning glass to remove the dirt from reflectors/lenses, filters. Do not use solvents or any other aggressive cleaning fluid.

13. Common malfunctions

①. The bulb can't be lit or will go off automatically after a few minutes.

1. This lighting is equipped with wind speed detection function, when the fan is abnormal, the lighting will automatically cut the power to protect the light bulb, so the first step should be test these four fans.

A. Check if the display flashes quickly after the bulb goes out, and if so, then enter information menu to Error Message-Fan information. The fan speed value is 0 when the bulb is off, after the bulb is lit around 45 second, the fans start working, if one of these fans value is less than 2000, the bulb will be turn off.

B. solution: re-plug the terminal of the fans, make sure they have good connection with PCB. If the fan is broken, then change it.

2. Check the display PCB, see if the display PCB has at least 11.5v output to fan.

(1, 3 and 4, 6 wires, as pictures), sometimes the loosen terminals can also cause poor contact with the circuit board.

3. Please check that the heat dissipation fan is working properly. If the fan does not work properly, it will cause the lamp igniter or power supply temperature to be too high and the automatic protection.

4. Please check that the lamp igniter has 380v input and 60-100v output. An abnormal voltage can cause the bulb to fail to start.

5. Check the PFC, see if it has 380v output.

②. Reduced Luminosity

- A. Lamp exhausted or defective. Please replace the lamp
- B. Dust or grease deposited. Regular cleaning of optical parts is recommended.

③. Electronics non-operational, address flashing.

- A. Incorrect addressing or No signal received.
- B. Signal cable disconnected.
- C. signal transmission cable faulty
- D. Signal attenuation.
- E. Controller faulty or peripheral signal interference or Control protocol incompatibility.
- F. Running Built-in program.

④. The image projected has a halo.

Check that the value of the auto focus channel is appropriate for the current projection distance,

⑤. The device intermittent work.

Check if the fan is dirty and working properly.

⑥. The device will not operate

- A. Ensure the power switch on.
- B. Check if the fuse is broken.
- C. Check if the power supply has AC100-240V input and DC 12V+36V output
